Okta (OKT)

Vision
Secure, simple, standardized authorization

Mission
To allow authorization

Values
- Authorization
- Openness
- Security
- Simplicity
- Standardization
Data Access

Enable safe and secure access to protected data

**Stakeholder(s)**

**Application Developers**: For app developers... If you’re building...
- web applications
- desktop applications
- mobile applications

**API Developers**: For API developers... If you’re supporting...
- web applications
- mobile applications
- server-side APIs

JavaScript or browser-based apps ^ OAuth is a way to get access to protected data from an application. It’s safer and more secure than asking users to log in with passwords.

API Developers:
For API developers... If you’re supporting...
- web applications
- mobile applications
- server-side APIs
- mashups ^ Use OAuth to let application developers securely get access to your users’ data without sharing their passwords.
